Improve Communications and Increase Employee Satisfaction

Leveraging the power of our content management framework, we can build and maintain a customized intranet site to post crucial HR and Benefits information.

Organizations use Employee Portals to communicate easily with their employees through a secure intranet or web site accessible anytime, anywhere. The platform allows you to share HR & Benefits information while providing fresh, dynamic content that ensures that employees visit and use the site.

This tool allows our expert site administrators to fully-customize the look, if you would like, and to add or modify content, links, and attachments quickly and efficiently. We can even assign a sub-administrator in your company to manage some of the constantly changing content. The platform is easy to use, manage and control.

Trusted Platform

Our Web Application Framework is ideal for creating and deploying websites, corporate intranets and extranets, online publishing portals and custom vertical applications. Built for Microsoft ASP.Net and hosted through our business partner, HR Technology Advisors, our platform has unbelievable power and flexibility to accomplish all of your intranet objectives.

Virtual Plan Guides

With high-speed Internet access more readily available, it has become easier to deliver content rich with audio, video, graphics, logos, and animation for unique, customized benefit plan presentations that grab an audience. An overview of an employee's benefit options with plan specific information and costs can be recorded and branded around your company, then delivered via the Web. Employees, their spouses and/or dependants can have immediate access to this information from remote office locations, when traveling or at home.
